

This listing of claims will replace all prior versions, and listings, of claims in the application;

Listing of Claims:

1. (Canceled).

2. (Currently Amended) The adhesive for wood described in claim 1, wherein a concentrate solution or a diluted solution of the cedarwood oil is mixed into the resin base.

3. (Canceled).

4. (Currently Amended) An adhesive for wood comprising as a main component a resin base suitable for a wood adhesive ~~The adhesive for wood described in claim 3, wherein and, mixed into the resin base,~~ a micro capsule ~~that comprises~~ comprising a hollow septal wall made of a plurality of porous particles and including the cedarwood oil or Hinokitiol ~~included in the septal wall, and that can discharge wherein the cedarwood oil or Hinokitiol can discharge~~ out of the septal wall through a fine porosity of the porous particles constituting the septal wall or through a part of a flaked septal wall ~~is mixed into the resin base.~~

5. (Currently Amended) An adhesive for wood comprising as a main component a resin base suitable for a wood adhesive, and further comprising cedarwood oil or Hinokitiol mixed into the resin base wherein a porous particle having a humidity adjusting behavior is mixed into the resin base and the cedarwood oil or Hinokitiol is retained by the porous particle ~~The adhesive for wood described in claim 3, wherein the porous particle is either one of silica gel, diatomite,~~

zeolite and pumicite or a mixture of more than two of silica gel, diatomite, zeolite and pumicite.

6. (Currently Amended) An adhesive for wood comprising as a main component a resin base suitable for a wood adhesive, and further comprising cedarwood oil or Hinokitiol mixed into the resin base ~~The adhesive for wood described in claim 1,~~ wherein the resin base contains a mineral thickening agent and the cedarwood oil or Hinokitiol is retained by the mineral thickening agent.

7. (Original) The adhesive for wood described in claim 6, wherein the mineral thickening agent is sepiolite.

8. (Currently Amended) The adhesive for wood described in claim ~~1~~6, wherein a liquid containing Hinokitiol or a metal complex Hinokitiol is mixed into the resin base ~~instead of the cedarwood oil.~~

9. (Currently Amended) A woody material wherein a plurality of woody single panels ~~or a plurality of wortes~~ are overlapped in layers and each of adjacent single panels ~~or each of adjacent wortes~~ is bonded with an adhesive for wood applied between the adjacent single panels ~~or the adjacent wortes and characterized by that~~ wherein a main component of the adhesive for wood is a resin base for an adhesive and cedarwood oil or Hinokitiol is mixed into the resin base.

10. (Original) The woody material described in claim 9 ~~and that is comprising plywood~~ wherein an odd number of the single panels are arranged in a condition that a fibrous direction of each adjacent single panel makes a right angle alternately.

11. (Original) The woody material described in claim 9 ~~and that is comprising~~ laminated veneer lumber wherein a plurality of the single panels are arranged in a condition that a fibrous direction of each single panel is generally parallel.

12. (Currently Amended) The woody material described in claim 9 ~~and that is comprising~~ particleboard wherein a plurality of the ~~wortle~~ single panels are arranged in a condition that a fibrous direction of each ~~wortle~~ single panel is generally parallel.

13. (Currently Amended) The woody material described in claim 9, wherein the woody material is so arranged that a decorative sheet is bonded with a front face of a single panel ~~or a wortle~~ arranged at the most front side by the use of an adhesive and a main component of the adhesive is a resin base for an adhesive and the cedarwood oil ~~or Hinokitiol~~ is mixed into the resin base.

14. (Previously Presented) The woody material described in claim 9, wherein a concentrate solution or a diluted solution of the cedarwood oil is mixed into the resin base.

15. (Previously Presented) The woody material described in claim 9, wherein a porous particle having a humidity adjusting behavior is mixed into the resin base and the cedarwood oil or Hinokitiol is retained by the porous particle.

16. (Original) The woody material described in claim 15, wherein a micro capsule that ~~comprises comprising~~ a hollow septal wall made of a plurality of porous particles and including the cedarwood oil or Hinokitiol ~~included in the septal wall and that can discharge wherein the~~ cedarwood oil can discharge out of the septal wall through a fine porosity of the porous particles constituting the septal wall or a part of a flaked septal wall is mixed into the resin base.

17. (Previously Presented) The woody material described in claim 15, wherein the porous particle is either one of silica gel, diatomite, zeolite and pumicite or a mixture of more than two of silica gel, diatomite, zeolite and pumicite.

18. (Previously Presented) The woody material described in claim 9, wherein the resin base contains a mineral thickening agent and the cedarwood oil is retained by the mineral thickening agent.

19. (Original) The woody material described in claim 18, wherein the mineral thickening agent is sepiolite.

20. (Previously Presented) The woody material described in claims 9, wherein a liquid containing Hinokitiol or a metal complex Hinokitiol is mixed into the resin base ~~instead of the~~ cedarwood oil.
